

## ABSTRACT

The specification discloses a turn signal physical alert system. The alert is directed to a driver of a vehicle who inadvertently forget to turn the turn signal off. A turn signal can be left on and blinking in case of malfunction of the cancellation mechanism, in case the vehicle makes a turn of less than 90° or the person driving the vehicle is hearing impaired and does not hear the clicking sound of the system. The alert system consists of a time delay device which will activate a solenoid to vibrate against the seat on which the driver is sitting.
